

SAME AGENTS, DIFFERENT INSTITUTIONS

Three identical, individually aligned agents share one finite resource.

A No institution

Each agent is safe alone;
together they deplete the commons.

B A naïve fine

fixed fine per violation

Measured cooperation rises, but agents
game it; false fines erode trust.

C A designed institution

humans set rules,
can intervene

Graduated sanctions, repair, appeal:
cooperation sustained at low cost.

Position: evaluate the model-in-institution, not the model alone, and let humans author the rules.
